Bath Fittings

About us

Flamberg is an inspiration, skill, thought of fulfilling the dreams of common man for their bathroom desire. Since its beginning, Flamberg has learnt and then perfected the concepts of real bathing, technical

revolution and water management of individual product. Our belief is not only in capturing the market but offering the widest range, easy operations and true value for your money.

We have blended latest technology with regional local requirements of water characteristics, and patterns. All modern technological features are part of our products e.g.

- a. Anti friction ring for high torque operations.
- b. Deformation-free washers and 'O' rings, made of Niotrile and neoprene, usable upto 200 PSI.
- c. Anti- Splasher aeration system for air-water mixing in foam flow service.

Usage of lead free brass ingots for health and hygiene purpose. Customer proximity is extremely important to us, but even more crucial are long-term partnership based on mutual trust and respect - a strong tradition at Flamberg - our single most powerful attribute. We have special focus on dealer-friendly approaches, our business watchword being : **Once with us, always with us.**

Flamberg looks ahead to meet you with enthusiasm and cheer.

Installation Guidelines

Pre-installation Guidelines

Better use 25mm pipeline instead of 20mm to ensure better pressure of water. Lay pipeline straight & vertical to get maximum water pressure.

Keep the number of bends in the pipeline to the minimum, to get good water pressure.

All pipelines should have Vent Pipes to ensure smooth flow of water and avoid air locking.

Hole-to-Hole distance for mixers should be standard 165mm for trouble free installations of mixers.

Outlet of Storage Tank should be minimum 10cm above the bottom to avoid dust, sand and foreign particles flowing with water into the fittings.

Clean the overhead tank and pipelines properly before fixing the fittings/taps to avoid sand, cement & other particles clog the taps.

Don't use excessive force to tighten the fittings. Excess length of the threads should be cut to suit the space inside the elbows; also wrenches and spanners should be softened by using plastic or cotton inserts before tightening the taps.

Test all the concealed fittings for leakage before plastering and fixing of tiles.

Please get your Plumbing done by experienced plumbers only.

Post-installation Guidelines

Cover the taps / mixers with poly pack after installations, till they are put to regular use, to protect the finish from dust, strains, paint, chemicals and damages.

Don't use harsh cleaning agents like acids, alkalizes and abrasives. Use soft sponge or wet cloth with soap water or 10% diluted vinegar to clean the fittings. However fine chalk powder can be used to shine the taps.

Clean the aerators (Foam-Flow) at regular intervals to maintain good flow of water.

Fittings should be operated gently while turning on/off. Over-tightening gives friction to threads that reduces the life of the fitting.

Do not lean or put excessive weight on taps. Excessive weight can damage or even break the taps.

In case of repair or replacement, insist on genuine PLATO spares from our authorised dealers.

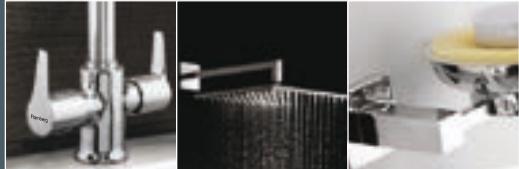

The following chart gives you an indication of the minimum required for getting a good performance from bath fittings.

S. No.	Product	Min. Press. In Lb.Sq.in	Min. Press. In Kgf/sq. cm	Min. Press. In Terms of Height of Tank*
1	Q/T, H/T or F/T fittings with Single Spindle	10 PSI	0.7 Kgf	07 meters
2	Q/T, H/T or F/T Mixers	15 PSI	1 Kgf	10 meters
3	Single Lever Mixers	20 PSI	1.5 Kgf	15 meters
4	Single Function Showers	15 PSI	1 Kgf	10 meters
5	Multi Function Showers	30 PSI	2 Kgf	20 meters
6	Flush Valves and Flush Cocks	10 PSI	0.7 Kgf	07 meters

* Kindly note that these figures are merely indicative. Water Flow rate depends on various other factors like Water Salinity, Dissolved constituents, bends in pipelines, diameter of pipes used.
